Theories

behind this teaching-learning Innovation

Entertainment-Education with information technology uses a blend of core communication theories and fundamental entertainment pedagogy to guide the preparation of the programming.

The major communication theories that influence Entertainment-Education include:

1/- **Persuasion Theory (Aristotle, Petty, Cacioppo)** :- Psychological characteristics affect the response of a person to messages. Also indicates the message and source factors that influence a person's response such as the credibility, attractiveness, and expertise of the source.

2/- **Theory of Reasoned Action (Ajzen, Fishbein)**:- Social influences affect behavior, including beliefs and perceived social norms.

3/- **Social Learning Theory (Bandura)** :- People learn by observing others and the consequences of their behavior. If the person so chooses, they then emulate the behavior by rehearsing the action, taking action, comparing their experiences to the experiences of others, and then adopting the new behavior.

4/- **Diffusion Theory: (Rogers)**:- Behavior spreads through a community or group over a period of time. Television may plant the idea, but Social networks reinforce it and cause it to grow.

5/- **Pedagogy** involved with Entertainment-Education using IT includes:

1/- **Relevance**: Learning is more likely when people can see the usefulness of the knowledge they are given.

2/- **Incremental Learning**: Learning is most effective when people can learn at their own pace.

3/- **Distributed Learning**: (Fossard) Different people learn in different ways over different periods of time.

It is important to present information differently so that people can absorb it.

MICROSOFT ITLA-2010

(Innovative Teacher Leadership Award)

A global mission to make science learning blissful for kids

Dr. BISEN
www.edugenes.com
www.edugenes.com

CONCEPT AND HYPOTHESIS

- 'T'edutainment' is the new concept of delivering science content incorporating information technology, education and entertainment.
- Cartoons and comics are powerful teaching agent as it eliminates the monotony in science teaching-learning from K - K9
- Kids quickly grasp different science concept through cartoon and comics.

A GLOBAL MISSION BEHIND THIS UNIQUE PROJECT

- Transform the whole science content in the form of digital comics, animations and online evaluation.
- To spread the concept of 'T'edutainment' for global teaching-learning community through imitatively designed virtual class www.edugenes.com.

NOW EVERY BODY CAN CREATE DIGITAL 'EDUCOMICS'

www.edugenes.com will empower global educators and learners to create digital educomics without having any drawing skill.

PROJECT AS AN AGENT OF CHANGE

- Adoption of this technique by more than 1,10,000 Indian teachers/students
- Mass Production of science comic content by the students for circulation through out the country
- Reduction of stress and monotony in science teaching-learning process giving quality academic excellence
- Students are enthusiastic to learn science concept.
- Increased enrolment of students in the state schools .

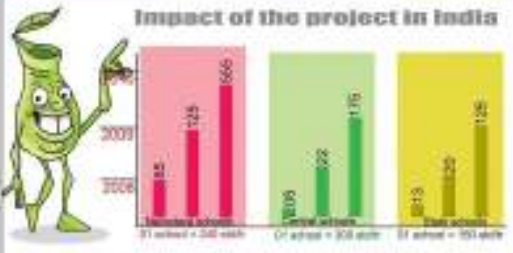

FUTURE PLAN

Transforming the content of all the subject from K - K9 in the form of 'T'edutainment' and making it available all over the country through virtual class room- www.edugenes.com.

INTERNATIONAL/ NATIONAL HONOURS AND AWARDS

Impact of the project in India

Year	1st school = 340 students	2nd school = 308 students	3rd school = 293 students

Father of 'Blended Learning'

A

The beginning of 20th-century books and papers were printed in wood type on a galley. Not in preparation for a printed or digital but for a handwritten copy as part of 'Serif Work' to include with Gaudin's work. That is the occasion when students, teachers and parents get involved in clearing the surroundings, clearing the roads, clearing the park and other roads. In 1985, from the National Service Scheme (NSS) more than 100 students, though Indians and NSS, from parts that don't know the name of the friends. Prof Sundar also taught in Political Science department of institutions which is done put once a year. It was the day of the municipal corporation to do clean the roads and streets regularly.

As we celebrate the 150th birth anniversary of Mahatma, his influence is all pervasive in our lives. The Swachh Bharat programme launched for cleanliness across

India in 2014 draws inspiration from Gandhi's Cleanliness related to Civil Disobedience. Gandhi had a habit of all activities during 1906-1907 and 1917.

Important principles outlined in the National Commission Report of 1986 and most recently National Education Policy-2020 has drawn inspiration from Gandhian thought. This includes the reorganisation of education and developing 21st century skills. Gandhi said, literacy is not the end of education, not even the beginning of it. Now, these skills of blended learning that have become a part of every education Commission's thinking, ICT in schools and colleges. Gandhi was an enlightened man and technology for himself should be for the benefit of all and should have computerised against the 'digital divide'. He can truly be called the Father of 'Blended Learning', who was from the school household bringing the best in the children, teachers, mind and spirit.

Socio-Emotional Disconnect

R

Recently, we had a workshop on socio-emotional skills for entrepreneurs and startups. There was a lot of discussion on the importance of soft skills, communication, and leadership. The most interesting part was the discussion on the importance of emotional intelligence. It was a challenge for many of us to understand the concept of emotional intelligence. We were all focused on the technical aspects of business and had forgotten the human element. We were all so busy with our work that we had lost touch with our emotions. We were all so busy with our work that we had lost touch with our emotions. We were all so busy with our work that we had lost touch with our emotions.

Sreekanth Nigam

ability to maintain an available one in the world. I added a third article to the workshop on the topic of Emotional Intelligence. It was a challenge for many of us to understand the concept of emotional intelligence. We were all focused on the technical aspects of business and had forgotten the human element. We were all so busy with our work that we had lost touch with our emotions. We were all so busy with our work that we had lost touch with our emotions. We were all so busy with our work that we had lost touch with our emotions.

While my neighborhood technician would never be responsible for the problem that with a common, our children are not feeling enough. And so, we need parents are making psychological and emotional health of their children a priority. We need to be able to speak to the problem.

any outdoor traditional games have been played in India. The Pittu or Pitta is one of the famous games but rarely played now especially in rural areas. In this game, approximately seven flat stones are arranged in a stack under a circle. The game has been played in two teams. A team that hits the arranged stack of stones with a ball and opponents struggle to rearrange the stones again in a proper stack.

This stack of stones, in fact, may be compared to a stack of books that have been demotivated scattered by the online live classes, time and again due to Corona threat. Students, on the other hand, cope with the frequent movement from online to offline and back again, but the practice has severely weakened the reader mindset mobile and tablet. It has distanced them from printed books, unfortunately. Reading books has several advantages, including less distraction, improved comprehension, and minimal biological damage. A book helps you build your future and it can be repeatedly accessed at your convenience.

I have closely connected with my worldwide educator friends. The common statement of concern on this issue I received from them is "The students have been severely distracted by over-screen time during the lockdown".

My eldest Piddigit scholar Michelle Ballant (New Zealand) says "Print can be aesthetically more enjoyable. It gives

students a sense of where they are located, they can see and feel where they are in a book or text".

Retention and comprehension of scholastic content are fairly very high with printed books. Digital devices lead to the physical and psychological segregation of kids from their family and friends. This would be very dangerous on account of their healthy academic stabilization.

Dr. Laura Strong (IUP, US) said, "The mystery of permanence is more deeply felt and held by words absorbed from a printed page than those hastily glanced on screens".

About the same feeling has been expressed by a very famous educator Prof. William G. Hill (AIJ, Missouri) He says, "Reading print books is guaranteed but for a lifelong in contrast to electronic ones".

Earlier we used to keep digital devices as far away as possible from kids. But, during pandemic, helplessly and reluctantly, we pushed them into the very dark valley of digital devices. The optimistic and bright side of online classes is visible for all but its dark side has already been started disappointing the entire stakeholders related to school education. A College professor Mr. Roger L. Broome II (Indiana University of Pennsylvania, US) says, "Reading printed book is more than fundamental, it shapes the mind and implements creativity".

Irrespective of different age groups, an innocent brain always is a source of infinite creativity. An extended screen time has caused a fading away of innocence of tender minds. They have been deeply distressed in course of smartphones and other electronic devices. Now the time has come when we must drive out the smartphone gradually. In its place the printed books should become the companion of every child. Otherwise, our total philosophy and principles of school education would fall through due to this smart device (mobile). Now, it's your choice - smart/mobile or smart/books. 📖
