

Nidhi Adlakha Senior Academic Consultant CIET, NCERT

# What is AI?

Artificial intelligence, or Al, is a technology that allows computers and machines to perform tasks that usually require human intelligence.

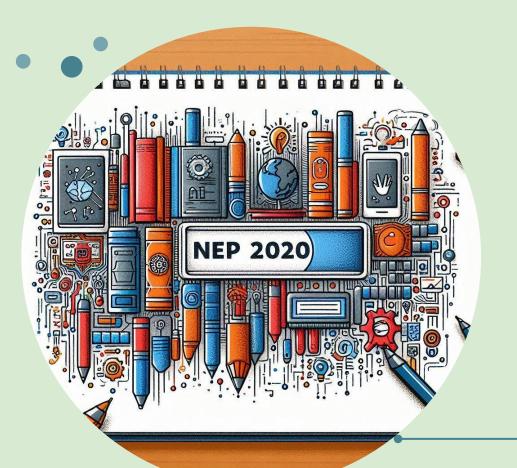

It performs diverse tasks which are as follows:

- learning from experience
- recognizing patterns
- understanding natural language
- solving problems

# What is Generative AI?

Generative AI, also known as gen AI, is a type of AI that can create original content in response to a user's request. Generative AI can create text, images, video, audio and presentation. What do NEP 2020 and NCFSE 2023 say about AI?

# **NEP 2020**

As per the clause 23.2, Artificial intelligence will not just change what students learn in the classroom but how they learn.

# **NCFSE 2023**

As per the clause 6.1.1.1, there are enormous possibilities to use **Artificial Intelligence** to improve the teaching-learning and assessment processes, supporting Teacher preparation and professional development.

# **NCFSE 2023**

As per the clause 6.1.1.2, **Generative AI** has the potential to play a complementary role in learning by significantly reducing the time and effort involved in generating content — quizzes, lesson plans, learning materials, adaptive assessments, interactive simulations, and virtual environments for engaging learning.

Content types you'll be able to create using Al

- Large Language Model refers to a type of artificial intelligence model that is trained on vast amounts of text data to understand, generate, and manipulate human language.
- These models are designed to predict and generate text based on the patterns they learn from their training data, making them capable of performing various natural language processing tasks.

Examples of LLM	
Copilot	Chat GPT

# **Generate Diverse Content**

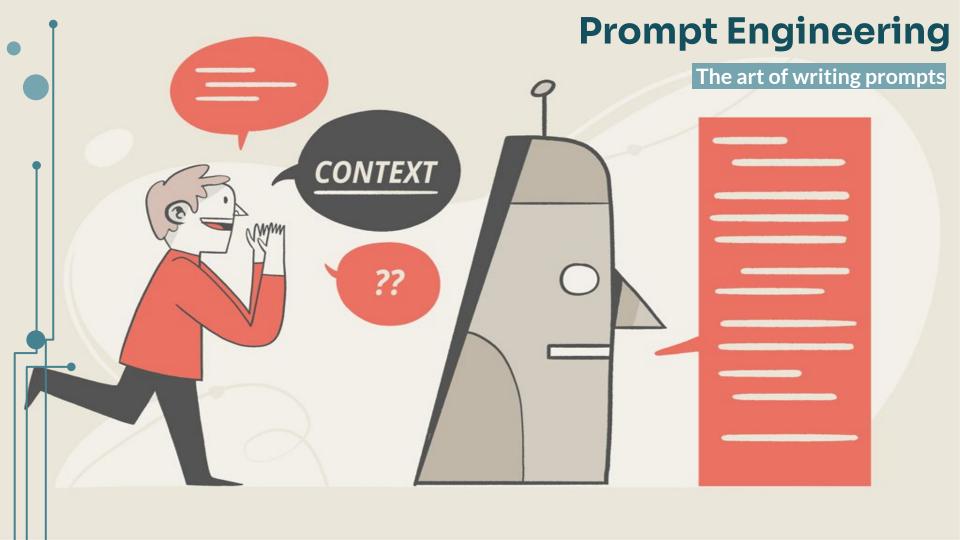

Diverse content can be generated from LLM. Some of the examples are given below:

**Generate script** 

https://sl.bing.net/fz7Tg HiZLtk Get Ideas for activity based learning

https://sl.bing.net/doA1C GrdZ4S Personalise the content

https://sl.bing.net/iZ6Eg7
9gg2u

Prompt engineering is the art and science of designing and optimizing prompts to guide AI models, particularly LLMs, towards generating the desired responses.

The effectiveness of your prompt directly influences the quality and relevance of the AI's output.

Scenario	Example Prompt
Creative Writing	"Write a short story about a young woman who discovers a magical portal in her attic."
Summarization	"Summarize the main points of the following news article on climate change."
Translation	"Translate the following text from English to Hindi: 'The quick brown fox jumps over the lazy dog.'"
Dialogue (simulate conversations)	"You are a friendly chatbot helping users troubleshoot their computer problems. Respond to the user's query: 'My computer won't turn on.'"
Multiple choice questions	Write 10 multiple choice questions with correct answers based on the topic electricity for NCERT class 10

**Example Prompts with responses from LLM** 

Tactic	Prompt Example
Define the desired length and format of the output	"Compose a 500-word essay discussing the impact of climate change on coastal communities."
Specify the target audience	"Explain the concept of machine learning in simple terms, suitable for a non-technical audience."
Include relevant facts and data	"Given that global temperatures have risen by 1 degree Celsius since the pre-industrial era, discuss the potential consequences for sea level rise."
Use precise language and avoid ambiguity	Instead of: "Write something about climate change," use: "Write a persuasive essay arguing for the implementation of stricter carbon emission regulations."
Quantify your requests whenever possible	Instead of: "Write a long poem," use: "Write a sonnet with 14 lines that explores themes of love and loss."

# Text to story videos generation

### Create a story using an LLM such as copilot

Prompt-Write a very short story in english

### **STORY- The Lost Key**

In a small, quiet town, there lived an elderly locksmith named Mr. Harris. One evening, as he was closing his shop, he found an old, rusty key on the floor. It was unlike any key he had ever seen.

Curious, Mr. Harris decided to find out what the key unlocked. He spent days searching the town, trying the key in every lock he could find, but none fit.

One day, while walking through the town's old cemetery, he noticed a forgotten mausoleum. The door had a peculiar lock that seemed to match the key. With a trembling hand, Mr. Harris inserted the key and turned it. The lock clicked open.

Inside, he found a dusty chest. Opening it, he discovered a collection of letters and photographs, revealing the story of a long-lost love between two people separated by war. The letters spoke of hope, dreams, and a promise to reunite.

Mr. Harris carefully preserved the letters and shared the story with the town. The tale of love and hope brought the community closer, reminding everyone of the power of enduring love.

# Text to story videos generation (cont.)

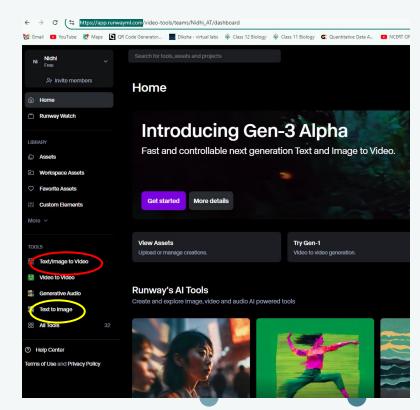

Al Tool- https://app.runwayml.com/

**STEP 1-** create images using "text to image" option highlighted with yellow colour. Download the suitable images

**STEP 2-** create video using "text/image to video" option highlighted with red colour.

- Upload downloaded images as asset.
- Explain the kind of animation required.
- Click on generate, a clip will be generated.
- Download the clipping.

**STEP 3-** put all the clippings in sequence in a video editor such as inshot and create a complete video.

# Text to story videos generation (cont.)

### **Exemplar Prompts**

**Image 1**- Draw an image of a locksmith. He is an old man with moustache and beard.

Animation 1-This man should move towards lock and key and hold them

**Image 2-** Draw an illustration of an old man with moustache and beard who found an old, rusty key on the floor. He should be looking towards the key kept on the floor
